

## Psychology

### Task 1

#### Key Approaches in Psychology

Research the following key approaches in Psychology. For each one, write a short summary (around 150 words per approach) including: its main assumptions, key figures associated with the approach (e.g. Skinner), and an example of a study or application.

Approaches to research:

- Behaviourist
- Cognitive
- Biological

### Task 2

#### Famous Psychological Study

Choose **one** of the following classic psychology studies. Research the study and write a report that includes:

- The aim of the study
- Method (participants, procedure)
- Key findings and conclusions
- Strengths and weaknesses of the study
- Ethical issues raised by the study

Choose one:

- Milgram's study of obedience (1963)
- Asch's conformity study (1951)
- Bandura's Bobo Doll experiment (1961)

### Task 3

#### Extended Written Response

Answer the following question in an essay format (approx. 500 words):

"Discuss the importance of ethical considerations in psychological research."

Your response should include reference to at least one psychological study, and consider how ethical issues such as consent, deception, and protection from harm can impact the validity and usefulness of psychological findings.
